## MP100 | PROGRAMMING PROJECT STATEMENT

Title: Project 5
Semester/Year: Fall 2019
Coding/programming languages: Github, Atom

Description (3-4 sentences giving the person looking at your work insight into your creative and technical process. For example: What is the general concept behind your program? What inspired it? Why did you choose these specific shapes/colors? How should the user interact with the program? What was the most challenging part of the project and how did you solve it? etc.):

My general concept behind my program for my first page was to keep it a bit fun by changing the shapes and colors to the shapes as they're being pressed by the mouse whereas for my second I kept it simple, but with the idea of how I feel everytime I see or hear "welcome" which is what the rects and colors represent, and as for the last one it was more of a transition I wanted to show within the imagination of what I view night to morning to look like. The inspiration came from what my imagination views certain things as, and the reason as to why I chose those shapes/colors was because they were the shapes/colors that first came to mind that I believed best represented my point exact for each page. As for the interaction part, press mouse is the way to go. Lastly, the most challenging part of the project for me was trying to transition from one shape into a different one and also, creating a circle within a circle and keeping it going on.
